HUANN ALMEIDA

Full Stack Developer | TypeScript • React & Next.js • Node.js • Python • SQL

+55 (83) 99126-3772 (WhatsApp) • huannvictor@gmail.com • huannalmeida.dev.br • github.com • linkedin.com

PROFESSIONAL SUMMARY

Full Stack Developer with solid experience in the JavaScript/TypeScript ecosystem, specialized in building high-performance services in **Node.js (NestJS, Fastify, Express)** and reactive web interfaces with **Next.js**. Hands-on experience in distributed application architecture, implementing **event-driven architectures (AWS SQS, Redis Pub/Sub)**, **Serverless (AWS Lambda)** development, and high-reliability relational data modeling in **PostgreSQL**.

Served as **Front-end Tech Lead**, leading an Agile squad, standardizing API consumption layers (BFF pattern), defining clean architectures, and conducting Code Review and Pair Programming practices. Proven track record of measurable impact building RPA bots and process automations in Python, converting complex operational bottlenecks into streamlined workflows with over **80% reduction in manual rework**. Focused on clean code, testability (**Jest, Supertest**), security (**OWASP / DevSecOps**), and scalability.

PROFESSIONAL EXPERIENCE

Commercial Assistant & Automation Developer | **Editora Construir** *(05/2018 - 06/2026 • João Pessoa, Brazil)*

Designed and implemented a Robotic Process Automation (RPA) suite using Python, integrating data extraction and batch file manipulation to resolve critical business bottlenecks. Automated complex commercial and operational workflows, achieving over 80% reduction in manual rework and cutting routine execution times by more than 70%.

Front-end Tech Lead | **Skill Labs** *(01/2024 - 06/2024 • Remote)*

Technically led a cross-functional Agile squad of developers in architecting and delivering scalable Single Page Applications (SPAs) within the React/TypeScript ecosystem. Established software quality guidelines through Pair Programming and systematic Code Reviews, reducing technical debt and bug regression rates in production.

Standardized the RESTful API integration and consumption layer following the Backend for Frontend (BFF) pattern, decoupling presentation logic and increasing team delivery velocity.

Front-end Developer | **Skill Labs** *(08/2023 - 01/2024 • Remote)*

Developed highly responsive and performant web interfaces using React and TypeScript, actively participating in architectural design and ecosystem library selection. Accelerated the team development cycle by 40% by building and customizing a centralized component library grounded in accessibility best practices and design system standards. Collaborated closely with Product Owners and business stakeholders to refine technical user stories, validate feature feasibility, and optimize the end-user experience.

Front-end Developer (Angular) | **Organize Soft** *(12/2022 - 02/2023 • Remote)*

Led the modernization of a legacy enterprise system, migrating critical modules to a modular, component-oriented architecture in Angular. Developed continuous data integration routines between the new front-end and the existing legacy back-end (Five-Win), maintaining high data flow consistency and zero service downtime.

EDUCATION

Degree in Systems Analysis and Development (B.S. Equivalent) | **Wyden** *(2024 - 2026)*

Higher education degree with a solid foundation in Software Engineering, Data Structures, Algorithm Complexity Analysis, Relational Data Modeling, and Modern Web Development.

MBA in Software Engineering | **FAMEF** *(2026 - 2027)*

Postgraduate specialization focused on Software Development Life Cycle (SDLC), Scalable Software Architectures, Object-Oriented Modeling with Design Patterns, Testing Pyramid (Unit, Integration, and Performance), and Continuous Code Quality Metrics.

MBA in Database Administration | **FAMEF** *(2026 - 2027)*

Postgraduate specialization focused on Relational and Non-Relational (NoSQL) Data Modeling, Advanced SQL, DBMS Administration and Performance Tuning, High Availability, Disaster Recovery, and Data Security and Governance.

MBA in Cybersecurity | **FAMEF** *(starting Feb/2027)*

Postgraduate program focused on Secure Development Practices (AppSec / OWASP Top 10), DevSecOps Culture, Cloud Identity and Access Management (AWS IAM), Threat Modeling, and Vulnerability Mitigation in Enterprise Environments.

TECHNICAL SKILLS

- **Front-end & UI:** React.js, Next.js, Angular, TypeScript, Zustand (State Management), Tailwind CSS, Radix UI, Framer Motion.
- **Back-end & Architecture:** Node.js, NestJS, Fastify, Express, **Python (Process Automation / RPA, Data Manipulation & Scripting)**, RESTful APIs, Serverless (AWS Lambda), Clean Architecture, SOLID, Clean Code, and BFF Pattern.
- **Distributed Systems & Messaging:** Event-Driven Architecture, AWS SQS (with Dead Letter Queues - DLQ), Redis (Pub/Sub & In-Memory Caching), WebSockets for real-time messaging, RabbitMQ and Kafka concepts.
- **Databases & ORMs:** PostgreSQL, Redis, MongoDB (NoSQL), Prisma ORM, Drizzle ORM, relational data modeling, referential integrity, and migrations.
- **Testing & Quality:** Automated Testing (Unit, Integration, and E2E), Jest, Supertest, React Testing Library (RTL), Testing Pyramid.
- **DevOps, Cloud & Tools:** Docker, Docker Compose, AWS Cloud (Lambda, S3, SQS, IAM), CI/CD (GitHub Actions), Git, Linux/Shell.
- **Methodologies & Leadership:** Agile Methodologies (Scrum, Kanban), Technical Leadership, Developer Mentoring, Code Review, Pair Programming.

FEATURED PROJECTS (GITHUB)

foodiary-api | Serverless & Event-Driven Architecture on AWS (github)

Stack: Node.js 22, TypeScript, Serverless Framework, AWS Lambda, AWS SQS, AWS S3, PostgreSQL (Neon), Drizzle ORM, Zod, JWT.
Event-driven API built on a serverless microservices architecture in the AWS cloud. Implements decoupled asynchronous processing via AWS SQS with fault-tolerance mechanisms using Dead-Letter Queues (DLQ) and reactive AWS S3 event triggers (ObjectCreated). Relational persistence in PostgreSQL with strict typing via Drizzle ORM and schema validation with Zod.

backend (Gam3rStore) | Modular Architecture, SOLID & Test Suite with NestJS (github)

Stack: Node.js, TypeScript, NestJS, Prisma ORM, PostgreSQL, Docker Compose, Jest, Supertest.
Enterprise back-end microservice developed under Clean Architecture and SOLID principles, leveraging Dependency Injection and strict modularization with NestJS. Features a comprehensive automated test suite covering unit tests and end-to-end integration tests (E2E with Jest and Supertest). Fully containerized environment using Docker Compose orchestrating PostgreSQL.

CommercialFlow-Bot | Robotic Process Automation (RPA) & Batch Data Processing (github)

Stack: Python, Pandas, OpenPyXL, Regular Expressions (Regex), OS/Shutil, Logging, Batch Scripting.
RPA tool built with a modular architecture for reading, extracting text, and automatically sorting hundreds of PDF orders. Uses regular expressions for data sanitization, automatically organizes files into client directories, and consolidates management reports in Excel, reducing manual operational time by over 80% with secure local execution and log traceability.

ftr-upload-widget-server & web | Full Stack Cloud Storage & Reactive State (github)

Stack: Node.js 22, Fastify, AWS SDK v3 (S3 & Multipart Storage), React 19, TypeScript, Zustand, Radix UI, Tailwind CSS.
Resilient Full Stack solution for large-scale file uploading and processing. On the back-end, implements direct AWS integration using AWS SDK v3 to manage multipart uploads directly to Amazon S3. On the front-end, leverages React 19 and Zustand for complex asynchronous state management with an accessible interface built on Radix UI.

fsw-donalds | Complex Domain Modeling, E-commerce & BFF (github)

Stack: Next.js 15 (App Router), React 19, TypeScript, PostgreSQL, Prisma ORM, Server Actions, Radix UI, Tailwind CSS.
Transactional self-service platform simulating retail and food service operations. Features advanced relational database modeling in PostgreSQL with strict referential integrity rules, cascading foreign keys, and state enums for order tracking. Adopts the BFF pattern via Next.js Server Actions to orchestrate business logic and the presentation layer.

LANGUAGES

English - Advanced: Fluency in reading technical documentation, professional writing, and spoken communication in global environments. (Certifications: CCAA, 2009 | Minds English School, 2018). | **Portuguese:** Native.
