Professional Summary

Full Stack Developer with experience in developing scalable web applications using the JavaScript and TypeScript ecosystem, including React, Angular, Next.js, and Node.js.

Experienced in creating RESTful APIs, JWT authentication, database modeling, and front-end/back-end integration.

Skilled in business process automation and RPA using Python, converting manual workflows into high-performance automated solutions. Developed projects that resulted in **over 70% reduction** in operational task execution time.

Background in technical leadership as a Front-end Tech Lead, participating in architectural decisions, mentoring developers, and delivering SPA applications focused on performance, scalability, and software engineering best practices.

Technical Skills

Languages: JavaScript, Typescript, Python

Front-end: React, Angular, Next.js, HTML5, CSS3, TailwindCSS

Back-end: Node.js, Express, APIs REST, JWT Authentication

Architecture: Clean Architecture, MVC, Modular Architecture

Databases: ORM (Prisma/Drizzle), PostgreSQL, Relational Modeling, Data Persistence

Tools & DevOps: Git, GitHub, Docker, AI-Assisted Coding (Gemini CLI), Continuous Integration (CI), Continuous Delivery (CD)

Methodologies: Agile, Scrum, Kanban

Others: API Integration, Form Validation, Performance Optimization, Responsive Design

Professional Experience

(05/2018 – 06/2026) Sales Assistant & Automation Developer | Editora Construir | João Pessoa/PB

Implemented automation solutions using **Python**, applying programming logic to solve complex business bottlenecks.

Optimized operational routines and eliminated repetitive tasks, achieving an **80% reduction in manual rework** and drastically increasing internal process efficiency.

(01/2024 – 06/2024) Front-end Tech Lead | Skill Labs | remote

Led a squad of 3 developers in architecting and building scalable Single Page Applications (SPAs) using agile methodologies. Managed the code review process, reducing sprint bug rates and ensuring agile software delivery.

Standardized RESTful API integration with UI components by creating a scalable communication layer, which facilitated maintenance and accelerated the addition of new features.

(08/2023 – 01/2024) Front-end Developer | Skill Labs | remote

Developed **accessible** and responsive web interfaces, ensuring **cross-browser compatibility**. **Troubleshoot** and **debugged** complex frontend issues, directly influencing architectural definitions and tech stack selection. **Accelerated the development cycle by 40%** by integrating and customizing advanced UI component libraries. Acted as a technical bridge between development and stakeholders, validating business rules and refining product strategy.

(12/2022 – 02/2023) Front-end Developer (Angular) | Organize Soft | remote

Worked on modernizing the company's legacy system, migrating codebases to the **Angular framework**. Performed **Continuous Integration (CI)** of the new front-end with a Five-Win based back-end, ensuring data integrity and application stability.

Featured Projects (GitHub)

Discord Clone & Real-time SPA

High-complexity application using React and TypeScript, focused on **accessible** and responsive interfaces, and advanced state management. Implemented reusable components and Clean Architecture principles.

Repository: [huannvictor/discord-clone](#)

Micro-SaaS Template & Backend Structure

Robust API architecture using Node.js and TypeScript, focused on modularity and maintenance. Utilized PostgreSQL and ORMs (Prisma/Drizzle).

Repository: [huannvictor/template-saas](#)

Assistant List Flow (Intelligent Processing)

Python automation system for document conversion and metadata extraction, integrating legacy systems with modern technologies. Reduced manual task time by over 70%.

Repository: [huannvictor/AssistantListFlow](#)

Business Automation Suite & RPA & RPA (AI-Assisted)

Ecosystem of Python automations using AI-Assisted approaches (LLMs) for intelligent data extraction and automated reporting.

Main Projects:

Stack: Python, Regex, PDF Processing, Data Automation

- [Assistant List Flow](#): Automation tool for converting PDF documents into images and generating metadata, optimizing batch integration for legacy systems.
- [Educ Form Bot](#): Automation for the generation and filling of PDF documents.
- [Contact Collector Scraper](#): Automated system for collecting educational data, including information cleaning and standardization.
- [Mapa Status](#): Tool for the analysis and organization of administrative data.
- [Commercial Flow Bot](#): Automatic document screening system with structured data extraction.
- [Scan Flow Bot](#): Python-based automation for generating reports from digitized documents.

Education

(2024 – 2026) Analysis and Systems Development | Wyden

Studies focused on algorithms, logic, data structures, requirements analysis, and modern web development.

Languages

English – Advanced: Technical reading and professional conversation.

Training: CCAA (2009), Minds (2018)
