HUANN ALMEIDA

Software Developer | Full Stack • Back-end • Front-end • Automation

João Pessoa, PB, Brazil (Available for Remote Work) • +55 (83) 99126-3772 (WhatsApp) • huannvictor@gmail.com

huannalmeida.dev.br • linkedin.com/in/huannalmeida • github.com/huannvictor

PROFESSIONAL SUMMARY

Software Developer in career transition, holding a completed degree in Systems Analysis and Development (ADS) and ongoing postgraduate (MBA) programs in Software Engineering and Database Administration. Brings professional maturity built over more than 6 years of corporate operations, combining deadline accountability, clear team communication, and a practical understanding of business workflows.

Hands-on experience developing modern web applications (TypeScript, JavaScript, React, Next.js, Angular, and Node.js), building and consuming REST APIs, working with relational databases (SQL / PostgreSQL), and creating Python automation scripts that reduced manual operational time by over 80%. Also holds a versatile foundation across multiple languages (Java, C#, Go, and PHP) and a strong ability to quickly learn new stacks and collaborate with senior developers.

PROFESSIONAL EXPERIENCE

Commercial Assistant & Automation Developer | Editora Construir (05/2018 to 06/2026 • João Pessoa, PB, Brazil)

- Worked in the company's administrative and commercial operations since 2018 and, between 2025 and 2026, applied programming in practice by creating Python scripts and bots to automate repetitive department tasks.
- Built tools to batch-read hundreds of PDF reports and spreadsheets, extract data using Regex, and generate consolidated Excel databases, reducing manual verification time by more than 80%.

Front-end Tech Lead (Volunteer Squad) | Skill Labs (01/2024 to 06/2024 • Remote)

- Provided technical support to a squad of entry-level volunteer developers, assisting with stack documentation (React and TypeScript), task organization in Jira, and collaborative Code Reviews.
- Structured the project modularly, implemented JWT authentication flows, and took charge of assembling UI screens in Figma using shadcn/ui components to keep the team's delivery pace on track.

Front-end Developer | Skill Labs (08/2023 to 01/2024 • Remote)

- Built responsive web screens and reusable components using React, TypeScript, Tailwind CSS, and Radix UI.
- Consumed REST APIs and participated in alignment meetings with Product Owners to clarify requirements and business rules.

Front-end Developer (Angular) | Organize Soft (12/2022 to 02/2023 • Remote)

- Assisted in modernizing enterprise system screens using Angular, integrating the front-end with a legacy corporate back-end (Five-Win) while maintaining stable, uninterrupted service.

EDUCATION & CERTIFICATIONS

- **Associate Degree in Systems Analysis and Development (ADS):** Faculdade Wyden (2024 - 2026) • Completed (Higher Education Degree).
- **MBA in Software Engineering:** FAMEF (2026 - 2027) • In progress (Best practices, web architecture, Clean Code, and automated testing).
- **MBA in Database Administration:** FAMEF (2026 - 2027) • In progress (Relational modeling, SQL queries, performance tuning, data integrity, and security).
- **Continuing Education & Practical Bootcamps:** Rocketseat (Clean Code, Full Stack Track, Node.js, React, React Native, Python, Java, C#, Go, DevOps, and AI Agents) and OneBitCode (Full Stack JavaScript Development).

TECHNICAL SKILLS & LANGUAGES

- **Core Languages (Hands-on & Projects):** TypeScript, JavaScript (ES6+), Python, SQL (PostgreSQL), HTML5, and CSS3.
- **Additional Languages (Practical Foundation in Courses & Bootcamps):** Java (Object-Oriented Programming), C# (.NET), Go (Golang), and PHP.
- **Front-end & Mobile:** React, Next.js (App Router, Server Actions), Angular, React Native (mobile foundation), Tailwind CSS, Radix UI, shadcn/ui, Zustand, Vite, and UI prototyping in Figma.
- **Back-end & APIs:** Node.js, NestJS, Fastify, Express, building and consuming RESTful APIs, WebSockets, Prisma ORM, Drizzle ORM, data validation with Zod, and JWT authentication.

- **Automation, Data & AI:** Python applied to process automation (RPA), Pandas, OpenPyXL, pdfplumber, Regex, Web Scraping (Requests / BeautifulSoup), desktop interfaces (CustomTkinter), and AI Agents / LLM integration.
- **Databases, DevOps & Best Practices:** PostgreSQL, Redis, MongoDB (working knowledge), Docker, Docker Compose, basic AWS Serverless (Lambda, SQS, S3), Git, GitHub, automated testing (Jest, Supertest, Unittest), Clean Code, SOLID, and agile methodologies (Jira).
- **Languages:** Portuguese (Native) • English (Advanced - fluent reading of technical documentation, writing, and strong professional communication).

PRACTICAL PROJECTS ON GITHUB

aparatus (Full Stack Web) | *Next.js 16, React 19, TypeScript, Tailwind CSS, Prisma ORM, PostgreSQL, Zod*
Repository: https://github.com/huannvictor/aparatus
Complete full stack web application featuring typed Server Actions, secure authentication (better-auth), accessible UI components with Radix UI, and PostgreSQL database integration.

backend - Gam3rStore (Back-end & APIs) | *Node.js, TypeScript, NestJS, Prisma ORM, PostgreSQL, Docker Compose, Jest, Supertest*
Repository: https://github.com/huannvictor/backend
Layered RESTful API built under Clean Architecture and SOLID principles, featuring dependency injection, Dockerized PostgreSQL database, and unit and integration automated test suites.

CommercialFlow-Bot & MapaStatus (Python Automation) | *Python, Pandas, OpenPyXL, pdfplumber, Regex, Concurrent Processing, Logging*
Repository: https://github.com/huannvictor/CommercialFlow-Bot
Suite of automation bots built to solve real operational bottlenecks at Editora Construir. Performs parallel parsing of hundreds of PDFs, automated file routing, and consolidated Excel reporting (see also: https://github.com/huannvictor/MapaStatus).

PricePulseAI (Python, Database & Security) | *Python, PostgreSQL, Docker Compose, CustomTkinter, PyInstaller, Unittest*
Repository: https://github.com/huannvictor/PricePulseAI
Price monitoring system featuring a standalone desktop GUI (.exe), Dockerized PostgreSQL database, automated unit tests, and practical secure coding measures (parameterized SQL queries against SQL Injection and credential protection).
